### **DETAILED ACTION**

The following action is in response to the amendment filed for application 10/693,055 on May 26, 2005.

#### ***Election/Restrictions***

Claim 1 is generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 11-14, directed to the species of Group I are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim.

In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

#### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mark Stone on July 13, 2005.

The application has been amended as follows:

claims 18-20 have been canceled.

***Allowable Subject Matter***

Claims 1-6, and 9-17 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record fails to show or render obvious the method for modifying the hydraulic circuitry of a factory installed automotive transmission, and particularly including applying pressure to a modified manual timing valve from first and second fluid flow passages until a predetermined pressure is applied thereto, and thereafter causing the manual timing valve to block fluid flow through said first fluid flow passageway, and including the remaining structure and modifications of said structure of claim 1. The present invention also particularly includes increasing the diameter of the boost valve and including the remaining structure and modifications of said structure in claims 15 and 17, respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mummert has been cited to show a similar transmission.
